Contents

1   Routine/Function Prologues

1.0.1   cvmix_driver

The stand-alone driver for the CVMix package. This driver reads in the cvmix_nml namelist to determine what type of mixing has been requested, and also reads in mixing-specific parameters from a mixingtype_nml namelist.

REVISION HISTORY:

```
SVN $Id: cvmix_driver.F90 71 2013-02-12 06:23:48Z mike.levy.work@gmail.com $
SVN $URL: https://cvmix.googlecode.com/svn/trunk/src/cvmix_driver.F90 $
```

INTERFACE:

```
Program cvmix_driver
```

USES:

```
use cvmix_kinds_and_types, only : cvmix_r8, &
                                  cvmix_strlen
```

1.0.2   cvmix_BL_pointer_driver

A routine to test the Bryan-Lewis implementation of static background mixing. Inputs are
BL coefficients in two columns, one that represents tropical latitudes and one that represents subtropical latitudes. All memory is declared in the driver, and the CVMix data type
points to the local variables.

REVISION HISTORY:

```
SVN:$Id: cvmix_bgrnd_BL_pointer.F90 94 2013-05-12 20:29:33Z mike.levy.work@gmail.com $
SVN:$URL: https://cvmix.googlecode.com/svn/trunk/src/drivers/cvmix_bgrnd_BL_pointer.F90 $
```

INTERFACE:

```
 Subroutine cvmix_BL_pointer_driver(nlev, ocn_depth)
```

USES:

```
use cvmix_kinds_and_types, only : cvmix_r8,               &
                                  cvmix_data_type,        &
                                  cvmix_global_params_type, &
                                  cvmix_bkgnd_params_type
use cvmix_background,      only : cvmix_init_bkgnd,       &
                                  cvmix_coeffs_bkgnd
use cvmix_put_get,         only : cvmix_put
use cvmix_io,              only : cvmix_io_open,          &
                                  cvmix_output_write,     &
                                  cvmix_io_close

Implicit None
```

INPUT PARAMETERS:

```
integer, intent(in)        :: nlev        ! number of levels for column
real(cvmix_r8), intent(in) :: ocn_depth   ! Depth of ocn
```

1.0.3   cvmix_BL_memcopy_driver

A routine to test the Bryan-Lewis implementation of static background mixing. Inputs are BL coefficients in two columns, one that represents tropical latitudes and one that represents subtropical latitudes. All memory is declared in the driver and then copied into the CVMix data structures.

REVISION HISTORY:

```
    SVN:$Id: cvmix_bgrnd_BL_memcopy.F90 94 2013-05-12 20:29:33Z mike.levy.work@gmail.com $
    SVN:$URL: https://cvmix.googlecode.com/svn/trunk/src/drivers/cvmix_bgrnd_BL_memcopy.F90 $
```

INTERFACE:

```
 Subroutine cvmix_BL_memcopy_driver(nlev, ocn_depth)
```

USES:

```
    use cvmix_kinds_and_types, only : cvmix_r8,               &
                                      cvmix_data_type,        &
                                      cvmix_global_params_type, &
                                      cvmix_bkgnd_params_type
    use cvmix_background,      only : cvmix_init_bkgnd,       &
                                      cvmix_coeffs_bkgnd
    use cvmix_put_get,         only : cvmix_put
    use cvmix_io,              only : cvmix_io_open,          &
                                      cvmix_output_write,     &
                                      cvmix_io_close

    Implicit None
```

INPUT PARAMETERS:

```
    integer, intent(in)        :: nlev       ! number of levels for column
    real(cvmix_r8), intent(in) :: ocn_depth  ! Depth of ocn
```

1.0.4   cvmix_shear_driver

A routine to test the Large, et al., implementation of shear mixing. Inputs are the coefficients used in Equation (28) of the paper. The viscosity coefficient is output from a single column to allow recreation of the paper's Figure 3. Note that here each "level" of the column denotes a different local gradient Richardson number rather than a physical ocean level. All memory is declared in the driver, and the CVMix data type points to the local variables.

REVISION HISTORY:

```
SVN:$Id: cvmix_shear_KPP.F90 94 2013-05-12 20:29:33Z mike.levy.work@gmail.com $
SVN:$URL: https://cvmix.googlecode.com/svn/trunk/src/drivers/cvmix_shear_KPP.F90 $
```

INTERFACE:

```
Subroutine cvmix_shear_driver(nlev)
```

USES:

```
use cvmix_kinds_and_types, only : cvmix_r8,               &
                                  cvmix_data_type,        &
                                  cvmix_global_params_type, &
                                  cvmix_shear_params_type
use cvmix_shear,          only : cvmix_init_shear,        &
                                  cvmix_coeffs_shear
use cvmix_put_get,        only : cvmix_put
use cvmix_io,             only : cvmix_io_open,           &
                                  cvmix_output_write,      &
                                  cvmix_io_close

Implicit None
```

INPUT PARAMETERS:

```
integer, intent(in) :: nlev     ! number of Ri points to sample
```

1.0.5   cvmix_tidal_driver

A routine to test the Simmons implementation of tidal mixing.

REVISION HISTORY:

```
SVN:$Id: cvmix_tidal_Simmons.F90 96 2013-05-12 22:32:03Z mike.levy.work@gmail.com $
SVN:$URL: https://cvmix.googlecode.com/svn/trunk/src/drivers/cvmix_tidal_Simmons.F90 $
```

INTERFACE:

```
Subroutine cvmix_tidal_driver(nlev)
```

USES:

```
use cvmix_kinds_and_types, only : cvmix_r8,                &
                                  cvmix_strlen,            &
                                  cvmix_data_type,         &
                                  cvmix_global_params_type, &
                                  cvmix_tidal_params_type
use cvmix_tidal,           only : cvmix_init_tidal,        &
                                  cvmix_coeffs_tidal
use cvmix_put_get,         only : cvmix_put
use cvmix_io,              only : cvmix_io_open,           &
                                  cvmix_input_read,        &
                                  cvmix_output_write,      &
                                  cvmix_io_close

Implicit None

!INPUT PARAMETERS
integer, intent(in) :: nlev
```

1.0.6   cvmix_ddiff_driver

A routine to test the double diffusion mixing module.

REVISION HISTORY:

```
SVN:$Id: cvmix_ddiff_drv.F90 94 2013-05-12 20:29:33Z mike.levy.work@gmail.com $
SVN:$URL: https://cvmix.googlecode.com/svn/trunk/src/drivers/cvmix_ddiff_drv.F90 $
```

INTERFACE:

```
Subroutine cvmix_ddiff_driver(nlev)
```

USES:

```
use cvmix_kinds_and_types, only : one,                    &
                                  cvmix_r8,               &
                                  cvmix_data_type,        &
                                  cvmix_global_params_type, &
                                  cvmix_ddiff_params_type
use cvmix_ddiff,          only : cvmix_init_ddiff,        &
                                  cvmix_coeffs_ddiff
use cvmix_put_get,        only : cvmix_put
use cvmix_io,             only : cvmix_io_open,           &
                                  cvmix_output_write,     &
                                  cvmix_io_close

Implicit None
```

INPUT PARAMETERS:

```
integer, intent(in) :: nlev
```

1.1   Fortran: Module Interface cvmix_io

This module contains routines to read CVmix variables from data files or output CVmix variables to data files. Currently only ascii and netCDF output are supported, as well as netCDF input, but the plan is to also include plain binary input / output as well.

REVISION HISTORY:

```
    SVN:$Id: cvmix_io.F90 100 2013-05-14 21:28:51Z mike.levy.work@gmail.com $
    SVN:$URL: https://cvmix.googlecode.com/svn/trunk/src/cvmix_io.F90 $
```

USES:

```
    use cvmix_kinds_and_types, only : cvmix_data_type, &
                                      cvmix_r8,        &
                                      cvmix_strlen
 #ifdef _NETCDF
    use netcdf
 #endif
```

PUBLIC MEMBER FUNCTIONS:

```
   public :: cvmix_io_open
   public :: cvmix_input_read
   public :: cvmix_output_write
   public :: cvmix_io_close
   public :: cvmix_io_close_all
   public :: print_open_files

   interface cvmix_input_read
     module procedure cvmix_input_read_2d_double
   end interface

   interface cvmix_output_write
     module procedure cvmix_output_write_single_col
     module procedure cvmix_output_write_multi_col
   end interface
```

DEFINED PARAMETERS:

```
   integer, parameter :: ASCII_FILE_TYPE  = 1
   integer, parameter :: BIN_FILE_TYPE    = 2
   integer, parameter :: NETCDF_FILE_TYPE = 3
   integer, parameter :: FILE_NOT_FOUND   = 404

   ! Probably not the best technique, but going to use a linked list to keep
   ! track of what files are open / what format they are (ascii, bin, or nc)
```

```
type :: cvmix_file_entry
  integer :: file_id
  integer :: file_type
  character(len=cvmix_strlen) :: file_name
  type(cvmix_file_entry), pointer :: prev
  type(cvmix_file_entry), pointer :: next
end type

type(cvmix_file_entry), allocatable, target :: file_database(:)
```

1.1.1   cvmix_io_open

INTERFACE:

```
subroutine cvmix_io_open(file_id, file_name, file_format, read_only)
```

DESCRIPTION:

Routine to open a file for writing. Goal is to support writing files in plain text (currently working), netCDF, and plain binary. Besides opening the file, this routine also adds an entry to file_database, a linked list that keeps track of what files are open and what type of file each identifier refers to. So it will be possible to output the same data in ascii and netCDF, for example.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
character(len=*),  intent(in) :: file_name, file_format
logical, optional, intent(in) :: read_only
```

OUTPUT PARAMETERS:

```
integer, intent(out) :: file_id
```

LOCAL VARIABLES:

```
type(cvmix_file_entry), pointer :: file_index
logical                         :: readonly
```

1.1.2 cvmix_input_read_2d_double

INTERFACE:

```
    subroutine cvmix_input_read_2d_double(file_id, var_name, local_copy)
```

DESCRIPTION:

Routine to read the requested 2D variable from a netcdf file and save it to a local array (file must be opened using cvmix_io_open with the optional argument readonly = .true.). Called with cvmix_input_read (see interface in PUBLIC MEMBER FUNCTIONS above). At this time, only works with netcdf files.

USES:

```
    Only those used by entire module.
```

INPUT PARAMETERS:

```
    integer,          intent(in)  :: file_id
    character(len=*), intent(in)  :: var_name
    real(cvmix_r8), dimension(:,:),  intent(out) :: local_copy
```

LOCAL VARIABLES:

```
    logical :: lerr_in_read
 #ifdef _NETCDF
    integer :: varid, nvar, i, ndims, xtype
    integer, dimension(2) :: dims1, dims2
    character(len=cvmix_strlen) :: tmp_name
 #endif
```

1.1.3 cvmix_output_write_single_col

INTERFACE:

```
    subroutine cvmix_output_write_single_col(file_id, CVmix_vars, var_names)
```

DESCRIPTION:

Routine to write the requested variables from a single column to a file (file must be opened using cvmix_io_open to ensure it is written correctly). Called with cvmix_output_write (see interface in PUBLIC MEMBER FUNCTIONS above).

USES:

```
    Only those used by entire module.
```

INPUT PARAMETERS:

```
    integer,                            intent(in) :: file_id
    type(cvmix_data_type),           intent(in) :: CVmix_vars
    character(len=*), dimension(:), intent(in) :: var_names
```

LOCAL VARIABLES:

```
    integer :: kw, var
 #ifdef _NETCDF
    integer                               :: nt, nt_id, nw, nw_id
    integer, dimension(:), allocatable :: var_id
 #endif
```

1.1.4   cvmix_output_write_multi_col

INTERFACE:

```
    subroutine cvmix_output_write_multi_col(file_id, CVmix_vars, var_names)
```

DESCRIPTION:

Routine to write the requested variables from multiple columns to a file (file must be opened using vmix_output_open to ensure it is written correctly). Called with vmix_output_write (see interface in PUBLIC MEMBER FUNCTIONS above).

USES:

```
    Only those used by entire module.
```

INPUT PARAMETERS:

```
    integer,                                intent(in) :: file_id
    type(cvmix_data_type), dimension(:), intent(in) :: CVmix_vars
    character(len=*),      dimension(:), intent(in) :: var_names
```

LOCAL VARIABLES:

```
    integer :: ncol, nw, nt, icol, kw, var
    logical :: z_err
 #ifdef _NETCDF
    integer                                    :: nt_id, nw_id, ncol_id
    integer,           dimension(:),   allocatable :: var_id
    real(kind=cvmix_r8), dimension(:,:), allocatable :: lcl_visc, lcl_diff, lcl_Rrho
 #endif
```

1.1.5   cvmix_io_close

INTERFACE:

```
subroutine cvmix_io_close_all
```

DESCRIPTION:

Routine to close all files open (meant to be called prior to an abort)

USES:

```
Only those used by entire module.
```

LOCAL VARIABLES:

```
integer :: fid
```

1.1.6   cvmix_io_close

INTERFACE:

```
subroutine cvmix_io_close(file_id)
```

DESCRIPTION:

Routine to close a file once all writing has been completed. In addition to closing the file, this routine also deletes its entry in file_database to avoid trying to write to the file in the future.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
integer, intent(in) :: file_id
```

LOCAL VARIABLES:

```
type(cvmix_file_entry), pointer :: ifile, file_to_close
logical                         :: file_found
integer                         :: file_type
```

1.1.7   get_file_name

INTERFACE:

```
function get_file_name(file_id)
```

DESCRIPTION:

Returns the name of the file associated with a given file_id. If the file is not in the database, returns FILE_NOT_FOUND.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
integer, intent(in) :: file_id
```

OUTPUT PARAMETERS:

```
character(len=cvmix_strlen) :: get_file_name
```

LOCAL VARIABLES:

```
type(cvmix_file_entry), pointer :: ifile
```

1.1.8   get_file_type

INTERFACE:

```
function get_file_type(file_id)
```

DESCRIPTION:

Returns the file format (enumerated in DEFINED PARAMETERS section) of a given file. If the file is not in the database, returns FILE_NOT_FOUND.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
integer, intent(in) :: file_id
```

OUTPUT PARAMETERS:

```
integer            :: get_file_type
```

LOCAL VARIABLES:

```
type(cvmix_file_entry), pointer :: ifile
```

1.2   Fortran: Module Interface cvmix_kinds_and_types

This module contains the declarations for all required vertical mixing data types. It also contains several global parameters used by the cvmix package, such as kind numbers and string lengths.

REVISION HISTORY:

```
SVN:$Id: cvmix_kinds_and_types.F90 99 2013-05-14 21:23:29Z mike.levy.work@gmail.com $
SVN:$URL: https://cvmix.googlecode.com/svn/trunk/src/shared/cvmix_kinds_and_types.F90 $
```

USES:

```
uses no other modules
```

DEFINED PARAMETERS:

```
! Kind Types:
! The cvmix package uses double precision for floating point computations.
integer, parameter, public :: cvmix_r8    = selected_real_kind(13), &
                              cvmix_strlen = 256

! Global parameters:
! The constant 1 is used repeatedly in PP and double-diff mixing.
! The value for pi is needed for Bryan-Lewis mixing.
real(cvmix_r8), parameter, public :: one = 1.0_cvmix_r8
real(cvmix_r8), parameter, public :: cvmix_PI = &
                                     3.14159265358979323846_cvmix_r8
```

PUBLIC TYPES:

```
! cvmix_input_type contains every possible necessary input field for all
! supported types of mixing.
type, public :: cvmix_data_type
    integer :: nlev = -1 ! Number of levels in column
                         ! Setting default to -1 might be F95...

1.3 Fortran: Module Interface cvmix_background

This module contains routines to initialize the derived types needed for time independent
static background mixing coefficients. It specifies either a scalar, 1D, or 2D field for viscosity and diffusivity. It also calculates the background diffusivity using the Bryan-Lewis
method. It then sets the viscosity and diffusivity to the specified value.

REVISION HISTORY:

```
SVN:$Id: cvmix_background.F90 55 2013-01-16 21:37:20Z mike.levy.work@gmail.com $
SVN:$URL: https://cvmix.googlecode.com/svn/trunk/src/shared/cvmix_background.F90 $
```

USES:

```
use cvmix_kinds_and_types, only : cvmix_PI,               &
                                  cvmix_r8,               &
                                  cvmix_data_type,        &
                                  cvmix_global_params_type,  &
                                  cvmix_bkgnd_params_type
use cvmix_put_get, only        : cvmix_put
```

PUBLIC MEMBER FUNCTIONS:

```
 public :: cvmix_init_bkgnd
 public :: cvmix_coeffs_bkgnd

interface cvmix_init_bkgnd
  module procedure cvmix_init_bkgnd_scalar
  module procedure cvmix_init_bkgnd_1D
  module procedure cvmix_init_bkgnd_2D
  module procedure cvmix_init_bkgnd_BryanLewis
end interface cvmix_init_bkgnd
```

1.3.1 cvmix_init_bkgnd_scalar

INTERFACE:

```
subroutine cvmix_init_bkgnd_scalar(CVmix_bkgnd_params, bkgnd_visc, bkgnd_diff)
```

DESCRIPTION:

Initialization routine for static background mixing coefficients. For each column, this routine sets the static viscosity / diffusivity to the given scalar constants.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
real(cvmix_r8), intent(in) :: bkgnd_visc
real(cvmix_r8), intent(in) :: bkgnd_diff
```

OUTPUT PARAMETERS:

```
type (cvmix_bkgnd_params_type), intent(out) :: CVmix_bkgnd_params
```

1.3.2 cvmix_init_bkgnd_1D

INTERFACE:

```
subroutine cvmix_init_bkgnd_1D(CVmix_params, CVmix_bkgnd_params, &
                                bkgnd_visc, bkgnd_diff, ncol)
```

DESCRIPTION:

Initialization routine for static background mixing coefficients. For each column, this routine sets the static viscosity / diffusivity to the given 1D field. If field varies horizontally, need to include ncol!

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
type(cvmix_global_params_type), intent(in) :: CVmix_params
real(cvmix_r8), dimension(:),   intent(in) :: bkgnd_visc
real(cvmix_r8), dimension(:),   intent(in) :: bkgnd_diff
integer, optional,              intent(in) :: ncol
```

OUTPUT PARAMETERS:

```
type(cvmix_bkgnd_params_type), intent(out) :: CVmix_bkgnd_params
```

1.3.3 cvmix_init_bkgnd_2D

INTERFACE:

```
subroutine cvmix_init_bkgnd_2D(CVmix_params, CVmix_bkgnd_params, &
                                bkgnd_visc, bkgnd_diff, ncol)
```

DESCRIPTION:

Initialization routine for static background mixing coefficients. For each column, this routine sets the static viscosity / diffusivity to the given 2D field.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
type(cvmix_global_params_type), intent(in) :: CVmix_params
real(cvmix_r8), dimension(:,:), intent(in) :: bkgnd_visc
real(cvmix_r8), dimension(:,:), intent(in) :: bkgnd_diff
integer,                        intent(in) :: ncol
```

OUTPUT PARAMETERS:

```
type(cvmix_bkgnd_params_type), intent(out) :: CVmix_bkgnd_params
```

1.3.4 cvmix_init_bkgnd_BryanLewis

INTERFACE:

```
subroutine cvmix_init_bkgnd_BryanLewis(CVmix_vars, CVmix_params,          &
                                       CVmix_bkgnd_params, bl1, bl2, bl3, bl4)
```

DESCRIPTION:

Initialization routine for Bryan-Lewis diffusivity/viscosity calculation. For each column, this routine sets the static viscosity & diffusivity based on the specified parameters. Note that the units of these parameters must be consistent with the units of viscosity and diffusivity – either cgs or mks, but do not mix and match!

The Bryan-Lewis parameterization is based on the following:

$$\kappa_{BL} = \text{bl1} + \frac{\text{bl2}}{\pi} \tan^{-1}\left(\text{bl3}(z - \text{bl4})\right)$$

$$\nu_{BL} = \text{Pr} \cdot \kappa_{BL}$$

This method is based on the following paper:

A Water Mass Model of the World Ocean
K. Bryan and L. J. Lewis
Journal of Geophysical Research, vol 84 (1979), pages 2503-2517.

In that paper, they recommend the parameters

$$\text{bl1} = 8 \cdot 10^{-5} \text{ m}^2/\text{s}$$

$$\text{bl2} = 1.05 \cdot 10^{-4} \text{ m}^2/\text{s}$$

$$\text{bl3} = 4.5 \cdot 10^{-3} \text{ m}^{-1}$$

$$\text{bl4} = 2500 \text{ m}$$

However, more recent usage of their scheme may warrant different settings. **USES:**

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
type(cvmix_data_type),        intent(in) :: CVmix_vars   ! Depth, nlev
type(cvmix_global_params_type), intent(in) :: CVmix_params ! Prandtl

! Units are first column if CVmix_data%depth is m, second if cm
real(cvmix_r8), intent(in) :: bl1,    &! m^2/s or cm^2/s
                              bl2,    &! m^2/s or cm^2/s
                              bl3,    &! 1/m   or 1/cm
                              bl4     ! m     or cm
```

OUTPUT PARAMETERS:

```
type(cvmix_bkgnd_params_type), intent(out) :: CVmix_bkgnd_params
```

1.3.5   cvmix_coeffs_bkgnd

INTERFACE:

```
subroutine cvmix_coeffs_bkgnd(CVmix_vars, CVmix_bkgnd_params, colid)
```

DESCRIPTION:

Computes vertical tracer and velocity mixing coefficients for static background mixing. This routine simply copies viscosity / diffusivity values from CVmix_bkgnd_params to CVmix_vars.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
type(cvmix_bkgnd_params_type), intent(in) :: CVmix_bkgnd_params
! Need to know column for pulling data from static_visc and _diff
integer,                      intent(in) :: colid
```

INPUT/OUTPUT PARAMETERS:

```
type(cvmix_data_type), intent(inout) :: CVmix_vars
```

1.4 Fortran: Module Interface cvmix_shear

This module contains routines to initialize the derived types needed for shear mixing, and to set the viscosity and diffusivity coefficients. Presently this scheme has implemented the shear mixing parameterizations from Pacanowski & Philander (1981) and Large, McWilliams, & Doney (1994).

REVISION HISTORY:

```
SVN:$Id: cvmix_shear.F90 84 2013-03-19 21:51:38Z mike.levy.work@gmail.com $
SVN:$URL: https://cvmix.googlecode.com/svn/trunk/src/shared/cvmix_shear.F90 $
```

USES:

```
use cvmix_kinds_and_types, only : one,                   &
                                  cvmix_r8,              &
                                  cvmix_data_type,       &
                                  cvmix_bkgnd_params_type, &
                                  cvmix_shear_params_type
use cvmix_put_get, only : cvmix_put
```

PUBLIC MEMBER FUNCTIONS:

```
public :: cvmix_init_shear
public :: cvmix_coeffs_shear
```

1.4.1 cvmix_init_shear

INTERFACE:

```
subroutine cvmix_init_shear(CVmix_shear_params, mix_scheme,  &
                            PP_nu_zero, PP_alpha, PP_exp, &
                            KPP_nu_zero, KPP_Ri_zero, KPP_exp)
```

DESCRIPTION:

Initialization routine for shear (Richardson number-based) mixing. There are currently two supported schemes - set `mix_scheme = 'PP'` to use the Pacanowski-Philander mixing scheme or set `mix_scheme = 'KPP'` to use the interior mixing scheme laid out in Large et al.

PP requires setting ν_0 (`PP_nu_zero` in this routine), $alpha$ (`PP_alpha`), and n (`PP_exp`), and returns

$$
\begin{aligned}
\nu_{PP} &= \frac{\nu_0}{(1 + \alpha \mathrm{Ri})^n} + \nu_b \\
\kappa_{PP} &= \frac{\nu}{1 + \alpha \mathrm{Ri}} + \kappa_b
\end{aligned}
$$

Note that ν_b and κ_b are set in `cvmix_init_bkgnd()`, which needs to be called separately from this routine.

KPP requires setting ν^0 (`KPP_nu_zero`, Ri_0(`KPP_Ri_zero`), and p_1 (`KPP_exp`), and returns

$$\nu_{KPP} = \begin{cases} \nu^0 & \text{Ri} < 0 \\ \nu^0 \left[1 - \frac{\text{Ri}}{\text{Ri}_0}^2 \right]^{p_1} & 0 < \text{Ri} < \text{Ri}_0 \\ 0 & \text{Ri}_0 < \text{Ri} \end{cases}$$

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
character(len=*),            intent(in) :: mix_scheme
real(cvmix_r8), optional, intent(in) :: PP_nu_zero, PP_alpha, PP_exp, &
                                     KPP_nu_zero, KPP_Ri_zero, KPP_exp
```

OUTPUT PARAMETERS:

```
type(cvmix_shear_params_type), intent(inout) :: CVmix_shear_params
```

1.4.2   cvmix_coeffs_shear

INTERFACE:

```
subroutine cvmix_coeffs_shear(CVmix_vars, CVmix_shear_params,    &
                          CVmix_bkgnd_params, colid, no_diff)
```

DESCRIPTION:

Computes vertical tracer and velocity mixing coefficients for shear-type mixing parameterizatiions. Note that Richardson number is needed at both T-points and U-points.

USES:

```
only those used by entire module.
```

INPUT PARAMETERS:

```
type(cvmix_shear_params_type),              intent(in) :: CVmix_shear_params
! PP mixing requires CVmix_bkgnd_params
type(cvmix_bkgnd_params_type), optional, intent(in) :: CVmix_bkgnd_params
! colid is only needed if CVmix_bkgnd_params%lvary_horizontal is true
integer,                          optional, intent(in) :: colid
logical,                          optional, intent(in) :: no_diff
```

INPUT/OUTPUT PARAMETERS:

```
type(cvmix_data_type), intent(inout) :: CVmix_vars
```

1.5 Fortran: Module Interface cvmix_tidal

This module contains routines to initialize the derived types needed for tidal mixing (currently just the Simmons scheme) and to set the viscosity and diffusivity coefficients accordingly.

REVISION HISTORY:

```
SVN:$Id: cvmix_tidal.F90 55 2013-01-16 21:37:20Z mike.levy.work@gmail.com $

```

1.6   Fortran: Module Interface cvmix_ddiff

This module contains routines to initialize the derived types needed for double diffusion
mixing and to set the diffusivity coefficient accordingly.

REVISION HISTORY:

```
SVN:$Id: cvmix_ddiff.F90 90 2013-05-06 22:29:42Z mike.levy.work@gmail.com $
SVN:$URL: https://cvmix.googlecode.com/svn/trunk/src/shared/cvmix_ddiff.F90 $
```

USES:

```
use cvmix_kinds_and_types, only : one,                    &
                                  cvmix_r8,                &
                                  cvmix_data_type,         &
                                  cvmix_ddiff_params_type
use cvmix_put_get, only : cvmix_put
```

PUBLIC MEMBER FUNCTIONS:

```
public :: cvmix_init_ddiff
public :: cvmix_coeffs_ddiff
```

1.6.1   cvmix_init_ddiff

INTERFACE:

```
subroutine cvmix_init_ddiff(CVmix_ddiff_params, units, strat_param_max, &
                            kappa_ddiff_t, kappa_ddiff_s, ddiff_exp1, &
                            ddiff_exp2, mol_diff, kappa_ddiff_param1, &
                            kappa_ddiff_param2, kappa_ddiff_param3)
```

DESCRIPTION:

Initialization routine for double diffusion mixing. This mixing technique looks for two
unstable cases in a column - salty water over fresher water and colder water over warmer
water - and computes different diffusivity coefficients in each of these two locations. The
parameter

$$R_\rho = \frac{\alpha(\partial\Theta/\partial z)}{\beta(\partial S/\partial z)}$$

to determine as a stratification parameter. If $(\partial S/\partial z)$ is positive and $1 < R_\rho < R_\rho^0$ then
salt water sits on top of fresh water and the diffusivity is given by

$$\kappa = \kappa^0 \left[1 - \left(\frac{R_\rho - 1}{R_\rho^0 - 1} \right)^{p_1} \right]^{p_2}$$

The user must specify which set of units to use, either 'mks' or 'cgs'. By default, $R_\rho^0 = 2.55$, but that can be changed by setting `strat_param_max` in the code. Similarly, by default $p_1 = 1$ (`ddiff_exp1`), $p_2 = 3$ (`ddiff_exp2`), and

$$\kappa^0 = \begin{cases} 7 \cdot 10^{-5} \text{ m}^2/\text{s} & \text{for temperature (\texttt{kappa\_ddiff\_t} in this routine)} \\ 10^{-4} \text{ m}^2/\text{s} & \text{for salinity and other tracers (\texttt{kappa\_ddiff\_s} in this routine).} \end{cases}$$

On the other hand, if $(\partial\Theta/\partial z)$ is negative and $0 < R_\rho < 1$ then cold water sits on warm warm water and the diffusivity for temperature is given by

$$\kappa = \nu_{\text{molecular}} \cdot 0.909 \exp\left\{4.6 \exp\left[-0.54\left(\frac{1}{R_\rho} - 1\right)\right]\right\}$$

where $\nu_{\text{molecular}}$ Is the molecular viscosity of water. By default it is set to $1.5 \cdot 10^{-6}$ m^2/s, but it can be changed through `mol_diff` in the code. Similarly, 0.909, 4.6, and -0.54 are the default values of `kappa_ddiff_param1`, `kappa_ddiff_param2`, and `kappa_ddiff_param3`, respectively.

For salinity and other tracers, κ above is multiplied by the factor

$$\text{factor} = \begin{cases} 0.15 R_\rho & R_\rho < 0.5 \\ 1.85 R_\rho - 0.85 & 0.5 \leq R_\rho < 1 \end{cases}$$

κ is stored in `CVmix_vars%diff_iface(:,1)`, while the modified value for non-temperature tracers is stored in `CVmix_vars%diff_iface(:,2)`.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
character(len=*),              intent(in) :: units ! "mks" or "cgs"
real(cvmix_r8),    optional, intent(in) :: strat_param_max, &
                                            kappa_ddiff_t, &
                                            kappa_ddiff_s, &
                                            ddiff_exp1, &
                                            ddiff_exp2, &
                                            mol_diff, &

   convect_visc       ! viscosity to parameterize convection
```

1.7.2 cvmix_coeffs_conv

INTERFACE:

```
subroutine cvmix_coeffs_conv(CVmix_vars, CVmix_conv_params)
```

DESCRIPTION:

Computes vertical diffusion coefficients for convective mixing.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
 type (cvmix_conv_params_type), intent(in)  :: CVmix_conv_params
```

INPUT/OUTPUT PARAMETERS:

```
 type (cvmix_data_type), intent(inout) :: CVmix_vars
```

1.8 Fortran: Module Interface cvmix_put_get

This module contains routines to pack data into the cvmix datatypes (allocating memory as necessary) and then unpack the data out. If we switch to pointers, the pack will just point at the right target and the unpack will be un-necessary.

REVISION HISTORY:

```
SVN:$Id: cvmix_put_get.F90 84 2013-03-19 21:51:38Z mike.levy.work@gmail.com $
SVN:$URL: https://cvmix.googlecode.com/svn/trunk/src/shared/cvmix_put_get.F90 $
```

USES:

```
use cvmix_kinds_and_types, only : cvmix_r8,                   &
                                  cvmix_data_type,            &
                                  cvmix_global_params_type,   &
                                  cvmix_bkgnd_params_type,    &
                                  cvmix_conv_params_type,     &
                                  cvmix_ddiff_params_type,    &
                                  cvmix_shear_params_type
```

 end interface cvmix_put
```

1.8.1 cvmix_put_int

INTERFACE:

```
  subroutine cvmix_put_int(CVmix_vars, varname, val, opts)
```

DESCRIPTION:

Write an integer value into a cvmix_data_type variable.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
character(len=*),           intent(in) :: varname
integer,                    intent(in) :: val
character(len=*), optional, intent(in) :: opts
```

OUTPUT PARAMETERS:

```
type(cvmix_data_type), intent(inout) :: CVmix_vars
```

1.8.2   cvmix_put_real

INTERFACE:

```
subroutine cvmix_put_real(CVmix_vars, varname, val, opts)
```

DESCRIPTION:

Write a real value into a cvmix_data_type variable.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
character(len=*),           intent(in) :: varname
real(cvmix_r8),              intent(in) :: val
character(len=*), optional, intent(in) :: opts
```

OUTPUT PARAMETERS:

```
type(cvmix_data_type), intent(inout) :: CVmix_vars
```

1.8.3 cvmix_put_real_1D

INTERFACE:

```
subroutine cvmix_put_real_1D(CVmix_vars, varname, val, opts)
```

DESCRIPTION:

Write an array of real values into a cvmix_data_type variable.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
character(len=*),               intent(in) :: varname
real(cvmix_r8), dimension(:), intent(in) :: val
character(len=*), optional,   intent(in) :: opts
```

OUTPUT PARAMETERS:

```
type(cvmix_data_type), intent(inout) :: CVmix_vars
```

1.8.4 cvmix_put_bkgnd_real

INTERFACE:

```
subroutine cvmix_put_bkgnd_real(CVmix_bkgnd_params, varname, val)
```

DESCRIPTION:

Write a real value into a cvmix_bkgnd_params_type variable.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
character(len=*), intent(in) :: varname
real(cvmix_r8),   intent(in) :: val
```

OUTPUT PARAMETERS:

```
type(cvmix_bkgnd_params_type), intent(inout) :: CVmix_bkgnd_params
```

1.8.5   cvmix_put_bkgnd_real_1D

INTERFACE:

```
subroutine cvmix_put_bkgnd_real_1D(CVmix_bkgnd_params, varname, val, &
                                   ncol, nlev)
```

DESCRIPTION:

Write an array of real values into a cvmix_bkgnd_params_type variable. You must use `opt='horiz'` to specify that the field varies in the horizontal direction, otherwise it is assumed to vary in the vertical.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
character(len=*),               intent(in) :: varname
real(cvmix_r8), dimension(:), intent(in) :: val
integer, optional,              intent(in) :: ncol, nlev
```

OUTPUT PARAMETERS:

```
type (cvmix_bkgnd_params_type), intent(inout) :: CVmix_bkgnd_params
```

1.8.6   cvmix_put_bkgnd_real_2D

INTERFACE:

```
subroutine cvmix_put_bkgnd_real_2D(CVmix_bkgnd_params, varname, val, &
                                   ncol, nlev)
```

DESCRIPTION:

Write a 2D array of real values into a cvmix_bkgnd_params_type variable.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
character(len=*),                 intent(in) :: varname
real(cvmix_r8), dimension(:,:), intent(in) :: val
integer,                          intent(in) :: ncol, nlev
```

OUTPUT PARAMETERS:

```
type (cvmix_bkgnd_params_type), intent(out) :: CVmix_bkgnd_params
```

1.8.7   cvmix_put_conv_real

INTERFACE:

```
subroutine cvmix_put_conv_real(CVmix_conv_params, varname, val)
```

DESCRIPTION:

Write a real value into a cvmix_conv_params_type variable.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
character(len=*), intent(in) :: varname
real(cvmix_r8),   intent(in) :: val
```

OUTPUT PARAMETERS:

```
type(cvmix_conv_params_type), intent(inout) :: CVmix_conv_params
```

1.8.8   cvmix_put_ddiff_real

INTERFACE:

```
subroutine cvmix_put_ddiff_real(CVmix_ddiff_params, varname, val)
```

DESCRIPTION:

Write a real value into a cvmix_ddiff_params_type variable.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
character(len=*), intent(in) :: varname
real(cvmix_r8),   intent(in) :: val
```

OUTPUT PARAMETERS:

```
type(cvmix_ddiff_params_type), intent(inout) :: CVmix_ddiff_params
```

1.8.9   cvmix_put_shear_real

INTERFACE:

```
subroutine cvmix_put_shear_real(CVmix_shear_params, varname, val)
```

DESCRIPTION:

Write a real value into a cvmix_shear_params_type variable.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
character(len=*), intent(in) :: varname
real(cvmix_r8),   intent(in) :: val
```

OUTPUT PARAMETERS:

```
type(cvmix_shear_params_type), intent(inout) :: CVmix_shear_params
```

1.8.10   cvmix_put_shear_str

INTERFACE:

```
subroutine cvmix_put_shear_str(CVmix_shear_params, varname, val)
```

DESCRIPTION:

Write a string into a cvmix_shear_params_type variable.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
character(len=*), intent(in) :: varname
character(len=*), intent(in) :: val
```

OUTPUT PARAMETERS:

```
type(cvmix_shear_params_type), intent(inout) :: CVmix_shear_params
```

1.8.11 cvmix_put_global_params_int

INTERFACE:

```
subroutine cvmix_put_global_params_int(CVmix_params, varname, val)
```

DESCRIPTION:

Write an integer value into a cvmix_global_params_type variable.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
character(len=*), intent(in) :: varname
integer,          intent(in) :: val
```

OUTPUT PARAMETERS:

```
type (cvmix_global_params_type), intent(inout) :: CVmix_params
```

1.8.12 cvmix_put_global_params_real

INTERFACE:

```
subroutine cvmix_put_global_params_real(CVmix_params, varname, val)
```

DESCRIPTION:

Write a real value into a cvmix_global_params_type variable.

USES:

```
Only those used by entire module.
```

INPUT PARAMETERS:

```
character(len=*), intent(in) :: varname
real(cvmix_r8),   intent(in) :: val
```

OUTPUT PARAMETERS:

```
type(cvmix_global_params_type), intent(inout) :: CVmix_params
```
